Natural microheterogeneity in HIA-B35 alleles influences
peptide-dependent allorecognition by cytocoxic r cells but
not of a peptide-restricted monoclonal antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ennis, P.D.; Zemmour, J.; Salter, R.D.; Parham, P.

#title Identification of the gene encoding a novel HLA-B39 subtype.
Two amino acid substitutions on the beta-sheet out of the peptide-binding floor form a novel serological epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ogawa, A.; Tokunaga, K.; Nakajima, F.; Kikuchi, A.; Karaki,

Mean 22.440; Variance 22.471; scale 0.999

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
